

New Rain Cover for Speedway Tracks by Airfence!

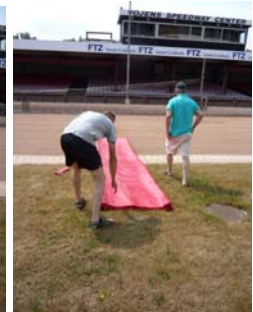

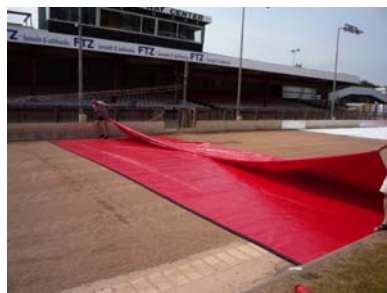

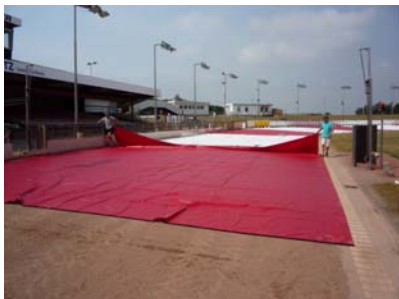

Been rained out at your Speedway once too often? You need Airfence Rain Cover for Speedway Tracks! How many times does it happen that too much rain prior to your event forces cancellation or ruins the track for safe and quality racing? Faced with the problem of rain-outs for our Speedway customers, Airfence Safety Systems has developed a rain cover to protect tracks from rain and excessive water content in the track prior to an event. It is made with quality PVC fabric and laid in sections, easy to handle, that join and seal together. Each Airfence Rain Cover is especially made to fit your track. It can be removed in 20 minutes immediately prior to an event, it adds greatly to the crowd's anticipation of the racing.

In another first for Vojens Speedway Centre, Denmark, they showcased the rain cover at their Nordic Speedway GP held in late August. Intermittent rain that fell in the 2 days preceding the event had no effect on the track, which was perfect for racing. They even had to water the track during the event! It also meant that rain late in the event didn't effect the track sufficiently to diminish track safety or racing. The event organizers were delighted with the success of the rain cover and the event.

Have you considered the real cost of rain-out cancellations? You now have the chance to change all that!

Your Airfence Rain Cover is easy to handle and can be packed up quickly and simply.
